MX-Relay

Reliable and safe e-mail with MX-Relay SMTP Service

Improve the delivery ratio of your e-mail and increase security

MX-Relay SMTP service is a reliable, powerful, easy-to-use service that maximizes the delivery rate of all your marketing and transactional emails. When spam is detected, MX-Relay quarantines it, sends you a warning and, most importantly, keeps you out of trouble. Less spam means that you can send e-mail to the recipient's inbox faster.

Stop IP-blacklisting and solve e-mail problems

With our SMTP Service you bypass all data limits that internet providers have on their outgoing e-mail service. MX-Relay SMTP Service delivers e-mail from your web hosting servers and detects and blocks compromised accounts and spam.

100% cloud, easy to install and maintenance free

As a full cloud-based service, SMTP Service requires no hardware or software to install and maintain. You can use the SMTP service with any mail server, e-mail service or application.

Why use a professional SMTP Service

It is important to follow the rules of the mail server, to prevent messages from ending up in spam folders or even being completely deleted by mail servers. Mail servers handle e-mails in different ways, based on the reputation of SMTP servers, white and black lists. SMTP servers offered by standard internet providers are not always reliable; they use random IP addresses and every now and then these IPs are blacklisted, which causes problems if you want to send e-mails. The worst thing is that you are not aware of these problems. When you send your e-mails, you will never know whether they have actually arrived. If you use an SMTP relay service to send your e-mail, you no longer have to pay attention to delivery problems, IP blacklisting and reputation problems that cause the desired mail to end up in the unwanted folder.

Send unlimited e-mail from 1 server for a fixed price per month

MX-Relay is the most transparent provider of hosted spam filtering solutions in the Benelux. Send unlimited e-mail from 1 server for a fixed price per month. No setup costs and extra costs for data usage are not charged.
